Politicians love small businesses

In addition, 1.3 **million** solo entrepreneurs.

SMEs **employ** two-thirds of all private sector workers.

With an average family size of 2.3, at least 4 million people—a significant portion of Hungary's population—live in households that **own** a small business.

The emergence of private enterprise in Hungary

1980s: The economy was dominated by approximately 1,000 “corporations” and 4,000 “cooperatives” (large socialist enterprises)

1983 onwards: Between 1,000 and 7,000 GMKs (“economic partnerships”) emerged as a form of spinoff microenterprise

1988: New corporate law introduced, total businesses reached 25,000

1990: Business count increased to 60,000

1992: Following new bankruptcy and corporate laws, total businesses surged to 164,000

Hungary, 1980 (Fortepan / Szalay Zoltán)

Hungary, 1990 (MTI)

Extreme growth in entrepreneurship

Most dynamism in foreign firms

Domestic firms remain very small

The dual economy

Foreign firms are something else

Large gaps in labor productivity

Widening gap in export share

Why don't small firms develop?

Business survival is very similar

But foreign firms grow faster
